

# CMP10

## Portable BlueTooth Thermal Printer

**ExpoTool's CMP10.**  
**Easy to use,**  
**with long battery life.**

## FEATURES

Compact, portable thermal printer provides paper leads or receipts

Extremely quiet and fast printing

Connects directly to ExpoTools portable readers

Multiple scanners can be linked to a single printer

Wireless printing to 50 feet

Built-in rechargeable lithium battery, charged from AC adapter or travel case

Prints 40,000 lines on a single charge

Auto power-off to conserve battery

Easy paper loading

Simple, maintenance free operation

Can run while charging

The CMP10 portable wireless printer is perfect for printing on the go or in situations where an electrical outlet is not available. With its direct interface to ExpoTools' portable readers and exceptionally fast and quiet printing technology, it is ideal for generating paper receipts for marketing leads captured at trade shows. The internal Lithium-ion battery can be recharged quickly by using the AC adapter to provide up to 40,000 lines of printing on a single charge. The printer is simply placed on a counter or tabletop located within approximately 50 feet of the area where a badge scanner will be used. Data is transmitted wirelessly utilizing Bluetooth technology, so there are no cables required.

Printing is initiated automatically from the badge scanner whenever a badge is scanned – there are no additional buttons to press or menus to navigate.

The CMP10 comes complete with one roll of single-copy direct thermal paper, and paper replacement is fast and easy. The printer maintains about 250 leads in memory, so scanning can continue even after paper has run out or is being replaced.

The CMP10 can be combined with an AT700 scanner and placed on a stand to create a self scanning station that can be used to print customized receipts, proof of participation or instructions.

ExpoTools has designed special, rugged transport cases which are supplied with the CMP10 rental units for ease of handling and reduced shipping costs. Each case holds 15 printers and also serves as a charging station with individual charging connections for each reader.
